

High Performance Cutting Tools

Forbes & Company Limited

SURFACE TREATMENT

- BF** Bright Finish
- TiN** Titanium Nitride Coating
- TiAlN** Titanium Aluminium Nitride Coating
- TiCN** Titanium Carbonitride Coating
- AlCrN** Aluminium Chromium Nitride Coating
- TiAlN WC/C** Titanium Aluminium Nitride Tungsten Carbide/Carbon
- Proton Plus** Proton Plus Coating
- Cr Base** Chromium Based Coating
-  Diamond Tipped
- D** Diamond Coating
- ST** Steam Tempered
- B&G** Black & Gold
- BL** Blackened Finish

WORKING MATERIAL

- P** Steel
- M** Stainless Steel
- K** Cast Iron
- N** Non Ferrous
- S** Super Alloys
- H** Hard Part

TOLERANCES

-  Cutting Dia Tolerances
-  Shank Tolerances
-  Cutting Dia Tolerances
-  Cutting Dia Tolerances
-  Cutting Dia Tolerances

TYPE OF POINT

- S** Split Point
- N** Normal Point

WORKPIECE HARDNESS

- Above 45 HRC** Hardness above 45 HRc
- 55-70 HRC** Hardness from 55-70 HRc
- 30 - 45 HRC** Hardness from 30-45 HRc
- 45-70 HRC** Hardness from 45-70 HRc
- 30 - 50 HRC** Hardness from 30-50 HRc

SHANK TYPE

-  Round Shank
-  Weldon Shank
-  Universal Shank

MILLING APPLICATIONS

-  Plunge Milling
-  Ramping Blank
-  Slotting: Ball Nose
-  Slotting: Square End
-  Side Milling/Shoulder Milling: Ball Nose
-  Side Milling/Shoulder Milling: Square End
-  Side Milling/Shoulder Milling: Roughing
-  Side Milling/Shoulder Milling: Roughing
-  3D Profiling

END MILLS LENGTH

- STUB** Economy / Stub Length
- REG** Regular / Standard Length
- LONG** Long Length
- EXTRA LONG** Extra Long Length
- LONG REACH** Long Reach Length

DRILLING APPLICATIONS

- DHD** Deep Hole Drilling

MATERIAL DETAILS

Material Group		Material Description	Content	Tensile Strength RM (MPa)*	Hardness (HB)	Hardness (HRC)	Torque Constant (Kc) N/mm²
Steel	P0	Low-Carbon Steels, Long Chipping	C <0,25%	<530	<125	—	2000
	P1	Low-Carbon Steels, Short Chipping, Free Machining	C <0,25%	<530	<125	—	2100
	P2	Medium- and High-Carbon Steels	C >0,25%	<530	<220	<25	2200
	P3	Alloy Steels and Tool Steels	C >0,25%	600-850	<330	<35	2400

Forbes & Company Limited

ABOUT US

Forbes & Company Ltd., founded in 1767, is the 2nd oldest registered company in India. Forbes is part of the USD 7.25 billion Shapoorji Pallonji group.

Forbes' Engineering division is a manufacturer of High Speed Steel & Carbon Steel-Threading Taps & Dies, Solid Carbide End Mills & Drills and Tungsten Carbide Rotary Burrs under the brand TOTEM.

Forbes is also a leading manufacturer of Spring Lock Washers under the brand BBBB and Advanced Marking & Automation solutions under brand BRADMA.

With 2 state-of-the-art manufacturing facilities in Mumbai and Aurangabad, Forbes' Engineering division prides itself on being a technology solution provider employing more than 500 employees. Market leader in India with a strong OEM presence via its 1500+ distributors and 7 Branch Offices. Exporting to more than 32 countries across Australia, Asia, Europe, Africa, and North & South America, Forbes is making giant strides on the global scene.

VISION

To be a market leader by empowering customers with innovative solutions in precision cutting tools and industrial automation through world-class practices

MISSION

To inculcate innovation led organizational culture to be a front runner in the field of technology

To add value to the customers business while adhering to our core values of QPD: Quality, Price, Delivery & The 5 C's: Convenience, Comfort, Care, Commitment and Customer Satisfaction (Customer Delight)

To develop a strong in-house Research & Development skillset to enhance the quality of solutions

To establish the cost leadership through world-class manufacturing and operational excellence

To be accountable towards the interest of all stakeholders, environment & society at large through all our actions and decisions

QUALITY POLICY

We commit ourselves for customer delight by delivering innovative products and solutions through continual improvement of business processes by active participation of our employees

We remain committed towards environment and statutory compliances.

CONTENTS

HSS TAPS

	PRODUCTS	DESCRIPTION	PAGE
	HSS SPIRAL POINT TAPS	HSS-E / PM Machine Taps Through Hole Application	1.001
	HSS SPIRAL FLUTE TAPS	HSS-E / PM Machine Taps Blind Hole Application	1.033
	HSS STRAIGHT FLUTE TAPS	HSS-E / PM Machine Taps Through & Blind Hole Application	1.069
	HSS FORMING TAPS	HSS-E / PM Machine Taps Cold Forming Application	1.087
	HOLLOW TAPS	HSS Hollow Taps General Purpose	1.100
	HSS HAND TAPS	HSS Hand Taps General Purpose	1.103
	TECHNICAL DETAILS		1.131

CARBIDE END MILLS

	PRODUCTS	DESCRIPTION	PAGE
	HIGH PERFORMANCE END MILL	End mills for hardened steels from 55-70 HRc / 45-70 HRc / Micro / Exotic materials / Composites- Synthetics / Graphite	2.001
	GENERAL PURPOSE & ECONOMY SERIES END MILLS	Solid Carbide End Mills and Ball Nose End Mills for General Purpose Application	2.137

CARBIDE DRILLS & REAMERS

	PRODUCTS	DESCRIPTION	PAGE
	SOLID CARBIDE DRILLS	3X, 5X, 7X, 12X, 15X and 20X Solid & Coolant Feed Drills	3.001
	SOLID CARBIDE REAMERS	TMRT Helical / Straight	3.036

CONTENTS

CARBIDE BURRS

	PRODUCTS	DESCRIPTION	PAGE
	TUNGSTEN CARBIDE ROTARY BURRS	Deburring Application	4.001

CARBON STEEL TAPS

	PRODUCTS	DESCRIPTION	PAGE
	CARBON STEEL HAND TAPS	General Purpose Application	5.001
	CASE SET	Set Of Tap, Die, Tap Wrench & Die Holder	5.025
	TECHNICAL DETAILS		5.028

DIES

	PRODUCTS	DESCRIPTION	PAGE
	ROUND SPLIT DIES	HSS & Carbon Steel Round Dies External Threading Application	6.004
	ROUND SOLID DIES	HSS Round Solid Dies External Threading Application	6.024
	HEXAGONAL DIES	HSS & Carbon Steel Hexagonal Dies External Threading Application	6.028
	TECHNICAL DETAILS		6.038

HSS DRILLS/HSS CENTRE DRILLS/ANNULAR CUTTERS

	PRODUCTS	DESCRIPTION	PAGE
	HIGH SPEED STEEL DRILLS	Parallel Shank & Taper Shank Drills	7.001
	CENTRE DRILLS	HSS Centre Drills	7.021
	ANNULAR CUTTERS	HSS & TCT Annular Cutters with One-Touch Shank	7.023

HOLLOW TAP

FEATURES

- Tapping up to 2D in blind hole
- More cutting teeth ensures perfect chip distribution
- Maximum self control due to non fluted guide portion

WORKPIECE MATERIAL

- Free Cutting Steel
- Structural Steel
- Carbon Steel
- Alloy Steel < 850 M/mm²
- Free Machining Stainless Steel
- Spheroidal Graphite
- Malleable Cast Iron

Hollow Taps

High Performance Cutting Tools

**HAND TAPS /
SHORT MACHINE TAPS**

HSS HAND TAPS

These are straight flute general purpose taps which can be used for both machine or hand tapping. They are generally the most economical tool for use on production runs, but are best on materials that produce chips, or where the swarf breaks readily. Where deep holes are to be tapped, in materials which produce stringy swarf, other types of taps may be needed, especially for coarse threads.

Hand taps can be supplied in sets of three; bottom, second and taper leads, or individually.

BOTTOM TAPS have a chamfer (lead) of 1–2 threads, the angle of the lead being around 18 degrees per side. They are used to produce threads close to the bottom of blind holes.

SECOND TAPS have a lead of 3-5 threads at 8 degrees per side. They are the most popular and can be used for through holes, or blind holes where the thread does not need to go right to the bottom.

TAPER TAPS have a lead of 7-10 threads at 5 degrees per side. The taper lead distributes the cutting force over a large area, and the taper shape helps the thread to start. They can therefore be used to start a thread prior to use of second or bottom leads, or for through holes.

High Performance Cutting Tools

TECHNICAL DETAILS

TAP NOMENCLATURE

- **THREAD LENGTH:** It is a total length of threaded portion.
- **OVERALL LENGTH:** The axial distance between the two extreme ends of a tap is called as the overall length of the tap.
- **SQUARE:** The square end of the tap shank, for holding it in the tap wrench.
- **SHANK :** It is the cylindrical part of tap which is used for hold or drive.
- **CUTTING EDGE :** The edge formed by the intersection of the flute face and the form of the thread, imposed on the land
- **FLUTE :** It is the groove in the body of tap which provides cutting edge. Permits removal of chips and allows coolant or lubricant to reach the cutting edge.
- **LAND :** It is the surface between cutting edge and non cutting edge
- **WEB :** The central portion of tap which joins the land and extends along the fluted portion of tap
- **WEB TAPER :** It is the increase in the web thickness from the entering end of the Tap towards the shank end of the flutes.
- **HEEL :** It is the edge formed by the intersection of the relieved surface behind the cutting edge and the flute
- **CHAMFER :** The taper on the threads at the front end of the tap made by grinding and relieving the crest of the first few teeth
- **RAKE ANGLE :** The angular relationship of the straight cutting face of the tooth with respect to a radial line through the crest of the tooth of cutting edge. There are three types of rake angle. The details given below. Positive rake means that the crest of the cutting face is angularly ahead. Negative rake means that the crest of the cutting face is angularly behind. Zero radial rake means the cutting face is directly on a radial line
- **CREST :** It is the prominent part of thread i.e. Top surface joining the two sides of thread
- **ROOT :** It is the bottom of groove between sides of two adjacent threads
- **FLANK :** The flank angle is the angle between individual flank and perpendicular to axis of thread, it is equal to half angle of thread
- **INCLUDED ANGLE :** It is the angle between two flanks of thread

TAP NOMENCLATURE

Thread Profile

- **DEPTH OF THREAD :** It is the distance between the crest and root of single thread
- **MINOR DIAMETER :** It is the diameter between the two root of opposite thread.
- **THREAD RELIEF :** The clearance produced on the land by gradually reducing the diameter of the entire thread form between the cutting edge and the non cutting edge
- **EFFECTIVE DIAMETER (PCD) :** The pitch circle diameter of thread as generated by straight line parallel to axis of tap. This straight line is called as Pitch line. Along the pitch line the width of threads and width of spaces are equal on a perfect thread. This is the important parameter in screw thread and it decides the quality of fit between the two threaded assembly.
- **MAJOR DIAMETER :** It is the diameter over the crest of thread. Basic major diameter, it is the nominal diameter

CHAMFER FORMS

Form A

6 - 8 threads for short through hole

Form B

3.5 - 5 threads with spiral point for all through holes and deep tapping holes

Form C

2 - 3 threads for blind holes; generally for aluminium and grey cast iron.

Form D

3.5 - 5 threads for short through hole

Form E

1.5 - 2 threads for blind holes with small run-out depth

Chamfer length for set of 3 taps

Taper Tap

6 threads approx.

Second Tap

4 threads approx.

Bottom Tap

2 threads approx.

Chamfer length for set of 2 taps (Pairs)

Taper Tap

5 threads approx.

Bottom Tap

2 threads approx.

P-Steel

Steel is the most used workpiece material in metal cutting. Steel as a material is comprised mainly of iron and carbon, often with a modest mixture of alloying elements. Steel has a typical carbon content of 0.05% to 1.5 %

Plain Carbon Steel

This category of steels includes those materials that are a combination of iron and carbon with no alloying elements. As the carbon content in these materials is increased, the ductility of the material is reduced. The carbon content is usually 0.8%. The hardness varies from 90 up to 350HB

Typical uses of this steel include: Axles, shafts, tubes, forgings, welded constructions, structural steel, deep drawn and stamped products, pressure vessel steel, and a variety of cast steels.

Alloy Steels

Plain carbon steels are made up primarily of iron and carbon, while alloy steels include these same elements with many other elemental additions. The purpose of alloying steel is either to enhance the material's physical properties or its ultimate manufacturability. The physical property enhancements include improved toughness, tensile strength, hardenability, ductility and wear resistance. Alloyed steels have a carbon content lower than 1.7 % and alloying elements such as Ni, Cr, Mo, V and W.

The machinability of steel differs, depending on alloying elements, heat treatment and manufacturing process (forged, rolled, cast, etc.).

Components manufactured from this steel include Crank Shafts, Connecting Rods, Cam Shafts, Hubs, Axles, Shafts, other forging components.

M-Stainless steel

As the name implies, this group of materials is designed to resist oxidation and other forms of corrosion, in addition to heat in some instances. These materials tend to have significantly greater corrosion resistance and strength at high temperatures than their plain or alloy steel counterparts due to the substantial additions of Chromium, Nickel, Molybdenum, Niobium and Titanium supply different characteristics, such as resistance towards corrosion and strength at high temperatures. These additions combine with Oxygen to create a passivating layer on the surface of the steel, which provides a non-corrosive property to the material.

Stainless steels are used extensively in the food processing, medical – surgical implants, chemical and petroleum industries to transfer corrosive liquids between processing and storage facilities. Stainless steels can be cold formed, forged, machined, welded or extruded.

Ferritic and martensitic stainless steel

Ferritic steels have magnetic properties. Martensitic stainless steels have relatively high carbon content, which make them hardenable. Weldability is low for both ferritic and martensitic and medium to low resistance against corrosion, which increases with a larger Cr-content.

Austenitic stainless steel

Austenitic Stainless steel are the most common and familiar types of stainless steel. They are most easily recognized as nonmagnetic. They are extremely formable and weldable, and they can be successfully used from cryogenic temperatures to the red-hot temperatures of furnaces and jet engines. They contain between about 16 and 25% chromium, and they can also contain nitrogen in solution, both of which contribute to their high corrosion resistance. Were it not for the cost of the nickel that helps stabilize their austenitic structure, these alloys would be used even more widely.

Work hardening produces hard surfaces and hard chips, which in turn lead to notch wear. It also creates adhesion and produces built-up edge. It has a relative machinability of 60%. The hardening condition can tear coating and substrate material from the edge, resulting in chipping and bad surface finish. Austenite produces tough, long, continuous chips, which are difficult to break. Generates lot of heat during machining.

K-Cast iron

Cast iron is an iron carbon mixture that is generally used to pour sand castings, as opposed to making billets or bar stock. It has excellent flow properties and therefore, when it is heated to extreme temperatures. Ideal material for complex cast shapes and intricate moulds.

This material is often used for automotive engine blocks, cylinder heads, valve bodies, manifolds, heavy equipment oil pans and machine bases.

Grey Cast Iron

Grey cast iron is an extremely versatile, very machinable relatively low strength cast iron used for pipe, automotive engine blocks, farm implements and fittings. This material receives its dark grey colour from the excess carbon in the form of graphite flakes, which give it its name. It has graphite in typical flake form and the main properties are low impact strength, good thermal conductivity, less heat when engine operates and low heat in cutting process; good dampening properties, absorbs the vibrations in the engine.

Malleable Cast Iron

When white cast iron castings are annealed, malleable iron castings are formed. Malleable iron castings result when hard, brittle cementite in white iron castings is transformed into tempered carbon or graphite in the form of rounded nodules or aggregate. The resulting material is a strong, ductile, tough and very machinable product that is used on a broad scope of applications.

Nodular Cast Iron

Nodular or “ductile” iron is used to manufacture a wide range of automotive engine components including cam shafts, crank shafts, bearing caps and cylinder heads. This material is also frequently used for heavy equipment cast parts as well as heavy machinery faceplates and guides. Nodular iron is strong, ductile, tough and extremely shock resistant.

Components manufactured from this material include hubs, tubing, rollers, exhaust manifolds, crankshafts, differential housings, bearing caps, exhaust manifolds, bedplates, turbo charger housings, clutch plates and fly wheels.

N-Non-ferrous materials

Non-ferrous metals are metals that do not contain iron. Non-ferrous metals are used because of desirable properties such as low weight (e.g., Aluminium), higher conductivity (e.g., Copper), non-magnetic property or resistance to corrosion (e.g., Zinc).

Aluminium (Al) alloys comprising less than 12-13% Silicon (Si) represent the largest part.

LM2 (ADC 12)

One of the two most widely used alloys for all types of die-castings. Mainly used in Automobile Industry for manufacturing components like Crank case, cylinder head, transmission housings, brackets.

LM4

The most versatile of the alloys, has very good casting characteristics and is used for a very wide range of applications.

LM5

Suitable for sand and chill castings requiring maximum corrosion resistance. Mainly used for castings in marine application.

LM6

Suitable for large, intricate and thin walled castings in all types of moulds. Also used where corrosion resistance or ductility is required.

LM9

Used for applications especially in low pressure die casting, requiring the characteristics of LM6 with higher tensile strength after heat treatment.

LM13

Used in applications where thermal stresses are more e.g. Piston. This alloy can withstand higher temperature and load. It has a good wear resistance properties and machinability. But it requires heat treatment.

LM 24

Suitable for large, intricate and thin walled castings in all types of moulds, also used where corrosion resistance or ductility is required

FORMULAS

TAP DRILL SIZE

- A. Tap Drill Size (Inch Size Cut Taps)
 $\text{Drill } \varnothing = \text{Basic O.D. OF Thread} - ((0.0130 \times \% \text{ of Full Thread}) / \text{Pitch (T.P.I.)})$
- B. Tap Drill Size (Inch Size Roll Form Taps)
 $\text{Drill } \varnothing = \text{BASIC O.D. OF Thread} - ((0.0068 \times \% \text{ of Full Thread}) / \text{Pitch (T.P.I.)})$
- C. Tap Drill Size (Metric Size Cut Taps)
 $\text{Drill } \varnothing = \text{Basic O.D. OF Thread} - ((\text{Pitch in mm} \times \% \text{ of Full Thread}) / 76.98)$
- D. Tap Drill Size (Metric Size Roll Form Taps)
 $\text{DRILL } \varnothing = \text{BASIC O.D. OF THD} - ((\text{Pitch in mm} \times \% \text{ of Full Thread}) / 147.06).$

OR

Drill Diameter = Nominal diameter - Pitch

INCH – METRIC CONVERSIONS

- A. INCHES TO MILLIMETERS $\text{MM} = \text{INCH} \times 25.4$
- B. MILLIMETERS TO INCHES $\text{INCH} = \text{MM} / 25.4$ - OR - $\text{INCH} = \text{MM} \times 0.03937$

THREADING FORMULAS

$$\text{Cutting Speed (Vc)} = \frac{N \times 3.14 \times D}{1000} \text{ (m/min)}$$

$$\text{RPM (N)} = \frac{Vc \times 1000}{3.14 \times D} \text{ (RPM)}$$

$$\text{Torque (Md)} = \frac{P^2 \times D \times Kc}{8000} \text{ (Nm)}$$

$$\text{Power (P)} = \frac{Md \times 2 \times 3.14 \times N}{60} \text{ (KW)}$$

Vc - Cutting Speed (m/min)

P - Pitch (mm)

Kc - Specific cutting force (N/mm²)

P - Power (KW)

Md - Torque (Nm)

D - Nominal Dia (mm)

N - RPM

SURFACE TREATMENT

While selecting the correct type of tap for a job, the material to be tapped should also be considered. This may determine the surface coating that should be applied to the tap in order to extend its life. Most taps are supplied with no surface treatment. They are referred to as 'Bright Finish'. These taps are mainly for use on non-ferrous materials, or steels that do not cold weld. Bright finish taps are therefore suitable for all hand operations, where speeds are too low for cold welding to occur, and for most machine operations.

STEAM OXIDE:

A black oxidized surface (Fe_3O_4) produced on the surface of a finished tap by means of a steam furnace. This oxidized surface is porous and helps retain cutting fluid in the working portion of the tap. The materials on which steam oxide has shown improvement in performance are stainless steels, steel forgings, tool and die steels, hot and cold rolled steels, and high nickel alloys.

TITANIUM NITRIDE (TiN):

A thin deposit (approx. 0.0001") applied to the surface of a finished tap utilizing PVD coating technology. TiN coating increases the surface hardness and wear resistance. Use of TiN coating on standard tools will help increase tool life in harder materials (up to 32 HRC), such as stainless steels, steel forgings, tool and die steels and hot and cold rolled steels. TiN coating also works very well with water-base cutting fluids.

TITANIUM CARBONITRIDE (TiCN):

Similar to TiN, TiCN is applied utilizing PVD coating technology. This coating combines high hardness (approx. 2800 vickers) with the anti-seizure properties of Nitride. A lower coefficient of friction helps reduce welding by 75% over TiN coated tools. These features make TiCN especially beneficial in non-ferrous material and hardened steels.

TITANIUM ALUMINUM NITRIDE (TiAlN):

TiAlN is applied using PVD coating technology. The addition of aluminum reduces friction and increases the coating oxidation temperature. As a result, TiAlN has increased resistance to heat and oxidation wear. This makes TiAlN better suited for High Speed/High Heat applications. TiAlN coating is incorporated into many of our tools.

CUTTING SPEEDS BASED ON MACHINING CONDITION

Tapping speeds are determined by many factors. The main ones are:-

- a) Thread pitch
- b) Material being tapped
- c) Hole depth
- d) Hole type, through or blind
- e) Depth of thread
- f) Lubricant quality and flow rate

Tapping speeds should be decreased if :-

- a) Lubricant is poor, or flow is restricted
- b) Bottom lead or Spiral flute taps are used
- c) Thread depth (%) increases.
- d) Thread pitch is coarse
- e) Cutting taper threads (50% normal speed)
- f) Cutting Acme or Trapezoidal threads (40% normal speed)

Tapping speeds can be increased if:-

- a) Thread depth decreases
- b) Thread pitch is fine
- c) Coolant flow and quality is good
- d) Spiral point or Fluteless (Roll) taps are used

TROUBLESHOOTING

Many factors can affect the quality of a tapped thread.
Some more common problems are listed along with probable causes.

POOR THREAD FINISH

Misalignment of tap and work piece
Incorrect feed rate
Chips/swarf not being cleared properly
Tapping device or machine faulty
Insufficient or incorrect lubricant
Incorrectly ground or blunt tap
Wrong tap selection

OVERSIZE/BELL MOUTHED

Misalignment
Incorrect feed rate
Incorrect tapping drill
Tapping device or machine faulty
Insufficient or incorrect lubricant
Incorrectly ground or eccentric tap
Wrong tap selection

EXCESSIVE TAP WEAR

Wrong tap selection
Blunt or incorrectly sharpened tap
Insufficient or incorrect lubricant
Tapping speed too high
Hole work hardened
Taps Technical Information

COLD WELDING

Wrong material composition
Blunt or incorrectly sharpened tap
Insufficient or incorrect lubricant
Tapping speed too high
Material too soft

TAP BREAKING

Incorrectly sharpened/blunt tap
Tap hits bottom of hole
Machine or tapping device faulty
Wrong tap selection
Incorrect or insufficient lubricant
Tapping speed too high
Hole work hardened
Inefficient chip or swarf removal
Incorrect tapping drill size

TAP TEETH CHIPPING

Incorrectly sharpened/blunt tap
Tap hits bottom of hole
Machine or tapping device faulty

In order to minimize problems the following rules should be followed:-

- 1) Use a pitch controlled tapping attachment
- 2) Choose the correct lubricant
- 3) Use the correct type of tap for the job
- 4) Use the correct tapping drill size
- 5) Choose the correct speeds and feeds
- 6) Keep taps sharp. Regrind with a proper machine
- 7) Ensure accurate alignment
- 8) Check hardness of material, especially when changing batches
- 9) Ensure thread gauging is recently certified

Work material	Forged Steel
Type of hole	Blind Hole
Hole dia	mm
Drill depth	42.0 mm
Tapping depth	40.0 mm
Machine	Radial Drilling Machine
Tapping direction	Vertical
Speed (Vc)	12m/min
Coolant	Water Soluble Oil
Tool Life	27 mts
Competitor tool life	32 mts

Technical data provided should be considered advisory only as variations may be necessary depending on the particular application.

CASE STUDIES

Industry Segment	Automotive
Tap series	SCF
Size	M12 X 1.25 SCC5 OH2 HSSE PM
Component	Crankshaft
Work material	Ductile Cast Iron
Type of hole	Blind Hole
Hole dia	10.8 mm
Drill depth	17.0 mm
Tapping depth	13.0 mm
Machine	SPM
Tapping direction	Horizontal
Speed (Vc)	120 RPM
Coolant	Neat Cutting Oil
Tool Life	800 Comp (Reduction in CPC)
Competitor tool life	800 Comp

Industry Segment	Automotive
Tap series	SA
Size	M8 X1.25 SA3 DIN 371
Component	Rear Axle Plate
Work material	Forged Steel (22 HRC)
Type of hole	Through hole
Hole dia	6.8 mm
Drill depth	20.0 mm
Tapping depth	15.0 mm
Machine	VMC
Tapping direction	Vertical
Speed (Vc)	800 RPM
Coolant	Water Soluble Oil
Tool Life	48 mts
Competitor tool life	40 mts

End mill nomenclature

Length of Cut (Flute Length) – Always select the shortest Flute Length possible for your application. By selecting the shortest Flute Length, you can increase rigidity and allow for higher feed rates.

End Mill Diameter – Always select the largest diameter possible for your milling operation. Increasing your diameter by just 10%, can increase your rigidity by 25%.

Helix Angle – Varies from 0 to 60 degrees. Higher helix angles can increase the number of teeth in a cut, and help in redirecting cutting forces. This is beneficial in harder to machine materials in particular. Changes in helix angle can also greatly affect the flute form of an end mill, and affect chip evacuation.

Rake Angle – The measurement of the curvature of the cutting edge in the face of the flute. A high rake angle will cut more aggressively and make the cutting action smoother, while a lower rake angle will increase the strength of the cutting edge.

Primary & Secondary Relief – The clearance directly behind the cutting edge. High primary relief angles will allow for more aggressive milling, while lower relief angles will increase the strength of the cutting edge. The primary relief will also affect the wear on a cutting edge. Lower primary relief angles can tend to develop larger wear lands.

Web Thickness – The cross section of the fluting of the end mill. Larger webs allow for more rigidity, while smaller webs allow for better chip evacuation. This feature is highly dependent on the material being machined.

How to reduce vibration & chatter in end milling

When chatter occurs, it can be self-sustaining until the problem is corrected. Chatter causes poor finish on the part, and will damage and significantly reduce the life of end mills. Carbide end mills are particularly susceptible to damage.

Typical methods to reduce chatter include reducing cutting forces by:

1. Reducing the number of flutes in cut.
2. Decreasing the chipload per tooth by reducing the feed or increasing the speed or RPM.
3. Reducing the axial or radial depth or cut.

Though these steps will reduce the chatter, slowing down the cutting process is not always the best course of action, and reducing the chipload can be detrimental to the cutter.

It is better to first improve rigidity and stability:

1. Use a larger end mill with a larger core diameter.
2. Use end mills with reduced clearance or a small circular margin.
3. Use the shortest overhang from spindle nose to tip of tool.
4. Use stub length end mills where possible.
5. Use balanced tool holders.
6. Rework fixture to hold the workpiece more securely.
7. Reprogram the cutter path to shift cutting forces into stiffer portions of the workpiece.
8. Look for ways to improve spindle speeds then adjust feed accordingly.

Chatter is common when machining corners. As the end mill enters the corner, the percentage of engagement increases the number of teeth in the cut. This drastically increases the cutting forces, causing chatter.

To reduce chatter when machining corners, consider using circular interpolation to produce a bigger corner radius than indicated by the part print. Then remove the remaining stock with a smaller end mill using circular interpretation.

Reducing Chatter in End Milling

Chatter in the form of vibration and noise is a frequent challenge when end milling. It can cause scalloping and uneven finishes.

To reduce chatter, try the following:

1. Ensure that the starting places for speeds and feeds are correct for the workpiece material and the cut.
2. Decrease the feed, or chipload per tooth/tool.
3. Make the workpiece as secure and rigid as possible.

4. Reduce excess overhang between the workpiece and spindle.
5. Select an end mill with less flutes.
6. Check the tool run-out.
7. Review the tool geometry to ensure the cutting face, relief, fluting and helix angle are appropriate for the workplace material.
8. If conventional, try climb milling.

End Mill Accuracy and Deflection

Because end mills are supported only at the shank end, they are subject to deflection, which can reduce the accuracy of the milled part. Several factors affect the amount of deflection that will occur.

1. Overall Length and Length of Cut: As the length of the mill increases, difficulty in maintaining dimensional accuracy also increases. Rigidity decreases in proportion to length of cut to the 3rd power. Thus, a 4th length of cut is 1/8 as rigid as a 2" length of cut. A regular length end mill cutting 7075 aluminum can deflect $<.002"$, while an extra long end mill can deflect $>.006"$.
2. End Mill Diameter: Rigidity increases in proportion to diameter to the 4th power. A 1" – diameter end mill is 16 times more rigid than a 1/2" end mill. A 1" – diameter end mill over a 5/8" length of cut in 1040 steel will cut to size, while a 3/8" – diameter end mill may deflect to $>.003"$.
3. End Mill Material Composition: Solid carbide is about three times more rigid and resistant to deflection than high-speed steel end mills, but not as tough.
4. Radial Depth of Cut and Axial Length of Cut: Heavy radial cuts as well as long axial lengths of cuts will deflect the end mill much more. A light-finishing pass is generally required to produce accurate parallel cuts.

Tips:

- Always use the shortest tool possible.
- Shorter tools can reduce chatter.
- Increase coolant.
- Try left-hand spiral end mills.
- Try using higher helix end mills.
- Increase overall system rigidity.
- Reduce overhang.
- Conventional milling can resist deflection better than climb milling.
- Dull tools deflect more than sharp tools.

Solid Carbide End Mills

End mills for hardened steels from 55-70 HRc

Advantages

- No EDM is required (milling is much faster).
- Polishing can be minimized.
- One single clamping, so it is easier to achieve accurate results.

Several strategies are possible

HPM (High Performance Machining)	HSM (High Speed Machining)
High cutting speed (Vc)	High cutting speed (Vc)
Large cutting depth (Ap)	Small cutting depth (Ap)
Small cutting width (Ae)	Small cutting width (Ae)
Medium feed per tooth (Fz)/ table feed (Vf)	High feed per tooth (Fz) / table feed (Vf)

Workpiece material: 1.2379

Hardness: 62HRc

	Competitor	Totem
Vc	100 m/min	100 m/min
n	3180 rpm	3180 rpm
Fz	0.05 mm/t	0.60 mm/t
Z	6	6
Vf	1.000 mm/min	11.500 mm/min
ap	20 mm	20 mm
ae	0.1 mm	0.1 mm

Depending on the workpiece different strategies can be chosen.
Chip removal and coolant in such applications are crucial.

Program

- Centre cutting high performance ball nose 2 Flute for 55-70 HRc
- Centre cutting high performance torus 4 Flute for 55-70 HRc
- Centre cutting high performance multi flute finisher for 55-70 HRc
- Centre cutting high performance multi flute finisher with corner radius for 55-70 HRc

Coating Details

- Multi layer coating
- Nano structure
- Extreme hardness
- Longer tool life

Optimized
center

Wear

Edge
preparation

For multi flute finisher with corner radius the tolerance on the corner radius is $\pm 0.005\text{mm}$.

Cutting parameters

Centre cutting high performance ball nose 2 flute for 55-70 HRc

Material group	Hardness	Cutting speed	Coolant
		Vc m/min	
H3	55-60 HRc	150 - 220	min.lub.
H4	60-70 HRc	200 - 250	min.lub.

Advantages

- Consistency
- Higher Tool Life

Tips:

- Use a rigid milling machine and clamping method
- Try to minimize entering and exiting the workpiece
- Use minimum lubrication or oil-mist-spray

Profiling

For the cutting speed Vc calculation the effective cutting diameter d_{eff} has to be taken into account.
See formula.

$$\beta \neq 0: d_{eff} = d \times \sin[\beta \pm \arccos(1 - 2a_p/d)]$$

Solid Carbide End Mills

Cutting parameters

Centre cutting high performance torus 4 flute for 55-70 HRc

Material group	Hardness	Cutting speed	Coolant
		Vc m/min	
H3	50-60 HRc	150 - 220	min.lub.
H4	60-70 HRc	200 - 250	min.lub.

Advantages

- Consistency of cutting speeds.
- Optimized performance.
- High productivity
- Ideal chipflow geometry
- Optimized for hardened steels

Solid Carbide End Mills

End mills for hardened steels 45-70 HRc

An optimized combination between geometry, coating and tolerances result in an excellent surface finish and extended tool life.

Program

- Centre cutting high performance ball nose 2 flute for 45-70 HRc
- Centre cutting high performance ball nose 4 flute for 45-70 HRc
- Centre cutting high performance torus 2 flute for 45-70 HRc
- Centre cutting high performance torus 4 flute for 45-70 HRc
- Centre cutting high performance multi flute finisher for 45-70 HRc
- Centre cutting high performance multi flute finisher with corner radius for 45-70 HRc
- Centre cutting high performance torus cutter for high feed machining
- Centre cutting high performance 2 flute micro end mill
- Centre cutting high performance 4 flute micro end mill
- Centre cutting high performance 2 flute micro end mill with corner radius
- Centre cutting high performance 4 flute micro end mill with corner radius
- Centre cutting high performance 2 flute micro ball nose

Ballnose geometries

- Special designed center
- Smooth surface finish
- Optimized coating for tool life improvement

Effective length compared with incline angle-
Increases the effective length

For the cutting speed Vc calculation the effective cutting diameter d_{eff} has to be taken into account. See formula.

$$\beta \neq 0; \quad d_{eff} = d \times \sin \left[\beta \pm \arccos \left(\frac{d - 2a_p}{d} \right) \right]$$

fz	0.,70 mm/t
vf	16800 mm/min
ap	0.,5 mm
ae	8.0 mm
Coolant	emulsion

Q	67.2 cm ³ /min
---	---------------------------

Advantages

- High feed rates
- Lower cycle time for roughing

This endmill can be used for pocket milling; for strategy see drawings above.

Always mill from inside to outside. If possible use helicoidal down-milling, otherwise ramping down.

Advantages

- Finishing application.
- Excellent surface finish.
- Save a polishing operation.

Coolant

Keep the tool cool!

It's recommend to use coolant (emulsion, minimum lubrication, or air) if possible. Coolant contributes to improve toollife, surface finish and chip evacuation.

- ❶ From the front into the flutes for direct cooling.
- ❷ Pointed from the right hand side in the flutes to evacuate the chips.

When to use, what kind of coolant:*

Emulsion	Minimum lubrication (Preference) Or Air
• $V_c < 200$ m/min	• $V_c > 200$ m/min
• Aluminium	• Graphite
• Copper	• Synthetics
• Exotic materials (Stainless Steel, Titanium, Hastelloy)	• Hardness over 50 HRc
• Hardness less than 50 HRc	

Tips:

Ensure proper cooling

Insufficient cooling causes temperature shocks, chip adhesion or tool breakage!

* Please follow instructions to keep the tool cool.

End mills for stainless steel, super alloys & exotic materials

Milling exotic materials

Most common problems faced when milling exotic materials

- Abrasiveness of the material.
- Resonance of the machine and/or workpiece.
- Vibrations of the workpiece and/or tool.
- Burrs
- Burr folding

Program

- Center cutting high performance 4 flute end mills for roughing/semi finishing of exotic materials
- Center cutting high performance 5 flute end mills for roughing/semi finishing of exotic materials
- Center cutting high performance multi flute end mills for finishing of exotic materials
- Center cutting high performance 2 flute ball nose for semi finishing/ finishing of exotic materials

Features of the geometry

- Higher productivity with smooth edges
- Optimized center
- New generation coating

25	< 25.0	25	0.080 - 0.130

- At shoulder milling, feed per tooth f_z^* for lower a_e values should be converted according formula.
- For shoulder milling cutting speed V_c may be increased up to 30%.

$$f_z^* = \frac{f_z}{a_e} \times \begin{cases} 0.10 \times d & f_z \times 3 \\ 0.25 \times d & f_z \times 2 \\ 0.50 \times d & f_z \times 1 \end{cases}$$

12	< 18.00	< 1.20	0.065 - 0.090

For the cutting speed Vc calculation the effective cutting diameter d_{eff} has to be taken into account. See formula.

$$\beta \neq 0; \quad d_{eff} = d \times \sin \left[\beta \pm \arccos \left(\frac{d - 2a_p}{d} \right) \right]$$

Solid Carbide End Mills

High volume milling - Trochoidal milling

Forbes has designed a program of HVM (High Volume Machining) or roughing on a wide spectrum of applications and materials: Steel up to 50HRc, alloy steel, tools steel, stainless steel, carbon steel, cast iron as well as materials that contain Chrome (Cr) or Nickel (Ni).

END MILLS

- Trochoidal milling
 - ▶ Stainless
 - ▶ Titanium
 - ▶ Steels

- Efficient production
- Longer tool life
- Lower cycle time

Trochoidal Milling is an efficient way to cut a slot other than using a standard slot milling method. In trochoidal milling, an end mill is used to machine the slot width using a circular movement. This is called the trochoid method

Advantages

- Highest dynamic speed rates
- Highest material removal rate
- Least cutting forces
- Prolonged tool life due to reduced shock
- High savings in cycle time when compared to the conventional milling strategy

Program

- Center cutting high performance trochoidal mills for stainless and titanium
- Center cutting high performance trochoidal mills for steel

---	--------------------------

Higher productivity

To be used for roughing applications on graphite:

Advantages

- High material removal rate.
- Special roughing pitch.
- Designed for high feeds on graphite applications.

Solid Carbide End Mills

Cutting parameters

Center cutting high performance micro end mill with corner radius for graphite

Material group	TSR	Hardness	Cutting speed	Coolant
	(N/mm ²)	HRc	Vc m/min	
N5			< 600	air
N6			< 600	air
N7			350 - 500	air

Advantages

- Excellent accuracy and tolerances
- Optimized surface finish on workpiece
- Leading diamond coating technology
- Superior tool life

Solid Carbide End Mills

Proton Plus (45-60 HRc)

Features

- Superior nano grain structure raw material
- Wear resistant grade
- Ideal chip flow geometry
- Close tolerance end mills for finishing for higher accuracy

Functions

- Operates at high cutting speeds on hardened materials
- Polishing for hardened dies can be minimized
- No need of multiple setups, Job can be finished with single setup with high accuracy

Benefits

- Higher Tool Life and consistency

Solid Carbide End Mills

Cutting parameters

Centre cutting Proton Plus end mill for 45-60 HRc
Centre cutting Proton Plus ball nose end mill for 45-60 HRc Steel

Material group	Hardness	Cutting speed	Coolant
	HRc	Vc m/min	
H1	48-50 HRc	120-150	min.lub.
H2	50-55 HRc	150-180	min.lub.
H3	55-70 HRc	180-200	min.lub.

Advantages

- Higher tool life
- Consistency
- Better surface finish

Tips:

- All suggested Parameters are starting values and they may be increased based on the rigidity of the setup
- If ap and ae are lesser than the recommended values the feed rates can be increased

Example: Profile Milling

- 1) Select material from chart
- 2) Select tool size
- 3) Select feed per tooth
- 4) Figure percentage of cutter diameter radial cut depth
- 5) Select chip load factor for radial depth
- 6) Select chip load factor x Feed per tooth
- 7) Answer: New feed per tooth
- 8) New feed per tooth x Number of teeth x RPM = mm/min (millimetres per minute)

Example: Slotting

- 1) Select material from chart
- 2) Select tool size
- 3) Select feed per chart
- 4) Multiply Feed per tooth x Number of teeth x RPM
- 5) Answer: mm/min (Millimetres Per Minute)

During Profile Milling less than 50% of the cutter diameter's Radial depth, the actual chipload at the cutting edge is less than the programmed chip load. Below are Chip Load factors depending on Radial Depth Percentage. Multiply your inches per tooth by the factor before figuring your IPM.

Spindle Max.

Should the calculated Spindle Speed be more than your actual Spindle Max., Use the Formula given below:

$$\frac{\text{Calculated Feed} \times \text{Spindle Max.}}{\text{Calculated Speed}}$$

Radial Depth in Percentage of Cutter Diameter	Increase Chip Load Factor
50%	1
30%	1.1
20%	1.2
15%	1.4
10%	1.8
5%	2.3
1%	5

---	-----------	---	----------	---	--------------

If axial depth is less than the ball diameter, the speed is figured using the effective cutting diameter.

Series F178TR METRIC

Example: Profile Milling

- 1) Select material from chart
- 2) Select tool size
- 3) Select feed per tooth
- 4) Figure percentage of cutter diameter radial cut depth
- 5) Select chip load factor for radial depth
- 6) Select chip load factor x Feed per tooth
- 7) Answer: New feed per tooth
- 8) New feed per tooth x Number of teeth x RPM = mm/min (millimetres per minute)

Spindle Max.
Should the calculated Spindle Speed be more than your actual Spindle Max., Use the Formula given below:
$$\frac{\text{Calculated Feed} \times \text{Spindle Max.}}{\text{Calculated Speed}}$$

During Profile Milling less than 50% of the cutter diameter's Radial depth, the actual chipload at the cutting edge is less than the programmed chip load. Below are Chip Load factors depending on Radial Depth Percentage. Multiply your inches per tooth by the factor before figuring your IPM.

Radial Depth in Percentage of Cutter Diameter	Increase Chip Load Factor
50%	1
30%	1.1
20%	1.2
15%	1.4
10%	1.8
5%	2.3
1%	5

Use Minimum value of cutting speed for harder material within range

Trochoidal Milling

Features

- Robust Core Design
- Multiflutes for High Productivity
- Available with alternate coating

Functions

- Operates at high cutting speeds
- Geometry programmed to suit adequate material removal at various enagemnet angles

Benefits

- Highest dynamic speed rates
- Highest material removal rate
- Least cutting forces
- Prolonged tool life due to reduced shock
- High savings in cycle time when compared to the conventional milling strategy

5 Flute

Centre cutting end mill for finishing steel and super alloys for Trochoidal milling

Features

- 5 Flutes
- Variable Helix
- Variable Pitch
- Effective for machining Steel/ Stainless (Wet) / Super Alloys (Wet)
- Also available with more flutes/ Neck and through coolant as a special option

Functions

- Effective for Trochoidal Milling and I-machining
- High MRR
- Optimal Flutes as per Diameter of Tool

Benefits

- Stable Cutting edge at elevated cutting conditions
- Superior Tool Life

Nano is an economic choice for high quality and performance when regrinding is not an option. Designed to minimise tool costs for applications when short lengths-of-cut are required. Nano has a short, compact design with minimised vibration and soft cut to support mill-turn machines. A good substrate and coating offers high tool life and stable manufacturing on a wide range of workpiece materials. This can be produced with different corner styles, Nano covers a wide range of applications. Roughing and finishing with one tool reduces tool inventory and tool changes providing increased productivity and value.

- One tool for roughing and finishing operations.
- Milling at a value price when re-grinding is not justified.
- Stable, low-vibration solution with soft cut for mill-turn machines.
- Stable, low-vibration solution with soft cut for mill-turn machines.
- Ask your local sales representatives about the options with corner radius

Features

- 4 Flutes
- Center Cutting
- Short length better economics

Functions

- High MRR
- Stable cutting at high cutting speeds

Benefits

- Superior tool life
- Low operating cost

Application data on page no 2.136

Solid Carbide End Mills

Cutting parameters

Series F135 METRIC

Workpiece Material Group		Example	Coolant	Slotting			Small Radial Depth ==> Large Radial Depth		
							1 x Diameter Axial Depth		
			 Max	25% Axial	50% Axial	100% Axial	25% Dia.	50% Dia.	100% Dia.
									
				Type	Vc (m/min)				
Non-Ferrous	N	Aluminium < 10% Si	•	305 - 610			610	495	305
		Aluminium > 10% Si	•	245 - 460			460	375	245
		Brass	•	150 - 275			900	230	155
		Plastic	•	245 - 365			365	320	245

Series F135 METRIC

Workpiece Material Group		Example	Milling Type	Tool Diameter (mm)								
				1/8	3/16	1/4	5/16	3/8	1/2	5/8	3/4	1
				mm/Tooth								
Non-Ferrous	N	Aluminium / Aluminium Alloys < 10% Si	Slotting	0.03	0.046	0.064	0.081	0.094	0.127	0.165	0.191	0.254
		Aluminium / Aluminium Alloys > 10% Si Brass Plastics	Profile Milling	.076 - 0.102	.102 - 0.152	.102 - 0.203	.152 - 0.229	.178 - 0.305	0.254 - 1.143	.381 - 1.1016	.381 - 1.1016	.381 - 1.1016

During Profile Milling less than 50% of the cutter diameter's Radial depth, the actual chipload at the cutting edge is less than the programmed chip load. Below are Chip Load factors depending on Radial Depth Percentage. Multiply your inches per tooth by the factor before figuring your IPM.

Radial Depth in Percentage of Cutter Diameter	Increase Chip Load Factor
50%	1
30%	1.1
20%	1.2
15%	1.4
10%	1.8
5%	2.3
1%	5

Example: Profile Milling

- 1) Select material from chart
- 2) Select tool size
- 3) Select feed per tooth
- 4) Figure percentage of cutter diameter radial cut depth
- 5) Select chip load factor for radial depth
- 6) Select chip load factor x Feed per tooth
- 7) Answer: New feed per tooth
- 8) New feed per tooth x Number of teeth x RPM = mm/min

Spindle Max.

Should the calculated Spindle Speed be more than your actual Spindle Max., Use the Formula given below:

$$\frac{\text{Calculated Feed} \times \text{Spindle Max.}}{\text{Calculated Speed}}$$

Surface treatment

STEAM OXIDE:

A black oxidized surface (Fe_3O_4) produced on the surface of a finished tap by means of a steam furnace. This oxidized surface is porous and helps retain cutting fluid in the working portion of the tap. The materials on which steam oxide has shown improvement in performance are stainless steels, steel forgings, tool and die steels, hot and cold rolled steels, and high nickel alloys.

TITANIUM NITRIDE (TiN):

A thin deposit (approx. 0.0001") applied to the surface of a finished tap utilizing PVD coating technology. TiN coating increases the surface hardness and wear resistance. Use of TiN coating on standard tools will help increase tool life in harder materials (up to 32 HRC), such as stainless steels, steel forgings, tool and die steels and hot and cold rolled steels. TiN coating also works very well with water-base cutting fluids.

TITANIUM CARBON NITRIDE (TiCN):

Similar to TiN, TiCN is applied utilizing PVD coating technology. This coating combines high hardness (approx. 2800 vickers) with the anti-seizure properties of Nitride. A lower coefficient of friction helps reduce welding by 75% over TiN coated tools. These features make TiCN especially beneficial in non-ferrous material and hardened steels.

TITANIUM ALUMINUM NITRIDE (TiAlN):

TiAlN is applied using PVD coating technology. The addition of aluminum reduces friction and increases the coating oxidation temperature. As a result, TiAlN has increased resistance to heat and oxidation wear. This makes TiAlN better suited for High Speed/High Heat applications. TiAlN coating is incorporated into many of our tools.

PROTON + COATING :

Proton + coating devised explicitly for solid carbide tools used in roughing and finishing of hardened steels and difficult-to-machine materials.

Major competitive advantages in tool and die-making can be attained by cutting steels with hardness >60 HRC.

Cr BASED COATING

Cr based coating, has made it possible to systematically optimize and decisively improve the key coating properties for milling applications.

Greater abrasion resistance, extra shear strength, lower adhesion tendency, maximum toughness and a very smooth surface achieve a quantum leap in drilling performance.

FORMULAS:-

INCH

$RPM = SFM \times 3.82 / \text{Tool Diameter}$

$IPM = RPM \times \text{number of teeth} \times (\text{inches/tooth})$

CONVERSION INCH TO METRIC

$Vc = SFM \times 0.3048$

$mm/min. = IPM \times 25.4$

METRIC

$RPM = Vc \times 318.057 / \text{Tool Diameter}$

$mm/min. = RPM \times \text{number of teeth} \times (mm/tooth)$

CONVERSION METRIC TO INCH

$SFM = Vc / .3048$

$IPM = (mm/min.) / 25.4$

SAFETY NOTE:-

Always wear the appropriate personal protective equipment such as safety glasses and protective clothing when using solid carbide or HSS cutting tools. Machines should fully guarded. Technical data provided should be considered advisory only as variations may be necessary depending on the particular application.

End Mill Troubleshooting guide

PROBLEM	CAUSE	SOLUTION
Chip packing	Too great a cutting amount	Adjust feed or speed
	Not enough chip room	Use end mill fewer flutes
	Not enough coolant	Apply more coolant. Use air pressure
Rough surface finish	Feed too fast	Slow down to correct feed
	Slow speed	Use higher speed
	Too much wear	Reground earlier stage
	Chip biting	Cut less amount per pass
	No end tooth concavity	Add margin (touch primary with oilstone)
Burr	Too much wear on primary relief	Reground sooner
	Incorrect condition	Correct milling condition
	Improper cutting angle	Change to correct cutting angle
No dimensional accuracy	Too tough condition	Change to easier condition
	Lack of accuracy (machine & holder)	Repair machine or holder
	Not enough rigidity (machine & holder)	Change machine or holder or condition
	Not sufficient number of flutes	Use end mill with greater number of flutes
No perpendicular side	Feed too fast	Slow down to correct feed
	Too great a cutting amount	Reduce cutting amount
	Too long a flute length or long overall length	Use proper length tool. Hold shank deeper
	Not sufficient number of flutes	Use end mill with greater number of flutes
Chipping	Feed too fast	Slow down to proper feed
	Feed too fast on first cut	Slow down on first bite
	Not enough rigidity of machine tool & holder	Change rigid machine tool or holder
	Loose holder	Tighten tool holder
	Loose holder (workpiece)	Tighten workpiece fixture
	Lack of rigidity (tool)	Use shortest end mill available. Hold shank deeper. Try down cut
	Teeth too sharp	Change to lower cutting angle, primary relief
Wear	Speed too fast	Slow down, use more coolant
	Hard material	Use higher grade tool material, add surface treatment
	Biting chips	Change feed speed to change chip size or clear chips with coolant or air pressure
	Improper feed speed (too slow)	Increase feed speed. Try down cut
	Improper cutting angle	Change to correct cutting angle
	Too low a primary relief angle	Change to larger relief angle
Breakage	Feed too fast	Slow down feed
	Too large cutting amount	Adjust to smaller cutting amount per teeth
	Too long flute length or long overall length	Hold shank deeper, use shorter end mill
	Too much wear	Reground at earlier stage
Chattering	Feed and speed too fast	Correct feed and speed
	Not enough rigidity (machine & holder)	Use better machine tool or holder or change condition
	Too much relief angle	Change to smaller relief angle. Add margin (touch primary with oil stone)
	Loose holder (workpiece)	Hold workpiece tighter
	Cutting too deep	Correct to smaller cutting depth
	Too long flute length or long overall length	Hold shank deeper, use shorter end mill or try down cut

Proton Series takes high-performance milling on hardend steels to the next level. This Product line is designed to provide maximum metal removal rates and superior surface finish

FEATURES

- Proprietary High Performance Coating.
- Special High Performance Geometry designed and proven on 45HRC-62HRC Material
- Common shank for tools <3mm for reduced breakage
- Available in Neck style
- Single End Mill for both Roughing and Finishing
- Diameter Range- 0.3-16mm as standard, custom solutions available

BENEFITS

- Higher Productivity and profitability
- Lower Cycle Times and CPC
- Improved Surface Finish
- Improved reliability and consistency in performance

High Performance Cutting Tools

#RPM = SFM x 3.82/Tool Dia.

#IPM = RPM x IPR

Deep Hole Drilling

Features

- Reinforced Core Design
- Superior Surface Treatment
- 4 Margins to Guide
- High Performance Coating
- Optimized Flute Design

Benefits

- Stable cutting edge
- Better Chip Evacuation
- Better Hole Straightness
- Superior Tool Life
- Eliminated Breakages

Case Studies

Challenge	Reduction in CPC
Component	Crank Shaft
Material	Forged Steel- 30 HRc
Competition	Mitsubishi
Solution	DRILL 8.00MMX240X290 SH8 T/C DHD PT
Machine	HMC
Vc	80m/min
RPM	3200
Feed in mm/min	230 @ entry/ 350 /220 @ exit
Depth	160 X 1 Hole
Existing Tool Life	64 meters
Tool Life Achieved	66 meters
Result	Better tool Life
Benefit	15% reduction in CPC

Challenge	Reduction in breakage of oil hole drill
Component	Crankshaft 4 Cyliner
Material	Forged Steel
Competition	Guhring
Solution	DRILL 5.50MMX84X125 SH6 T/C DHD PT
Machine	SPM
Vc	65m/min
RPM	3760
Feed in mm/min	200 @ entry/ 500 /1000 @ exit
Depth	78 X 4 Holes
Existing Tool Life	187 meters
Tool Life Achieved	190 meters
Result	No Breakage
Benefit	10% reduction in CPC

Challenge	Reduce burr folding at exit
Component	Cylinder Head
Material	Aluminium ADC-7% Si
Competition	OSG Korea
Solution	DRILL 6.00MMX118X175 SH6 T/C DHD
Machine	HMC HSK63A
Vc	188m/min
RPM	10000
Feed in mm/min	500 @ entry/ 1200 /500 @ exit
Depth	80 X 4 Holes
Existing Tool Life	800 meters
Tool Life Achieved	800 meters
Result	Negligible wear and burr folding
Benefit	10% reduction in CPC

Challenge	Reduction in breakage of oil hole drill
Component	Crankshaft 2 Cyliner
Material	Forged Steel SAE 1541B
Competition	Sumitomo
Solution	DRILL 4.97X115X165MM SH5 T/C DHD PT
Machine	HMC
Vc	73m/min
RPM	4700
Feed in mm/min	200 @ entry/ 700 /500 @ exit
Depth	95 X 2 Holes
Existing Tool Life	34.2 meters
Tool Life Achieved	38 meters
Result	No Breakage
Benefit	10% reduction in CPC

Challenge	Reduction in CPC
Component	Crankshaft 4 Cyliner
Material	Forged Steel 38 MnSiV6 30-32 HRc
Competition	OSG
Solution	DRILL 6.00MMX115X 165 SH6 T/C DHD PT
Machine	Angular SPM
Vc	55m/min
RPM	2400
Feed in mm/min	150 @ entry/ 450 /150 @ exit
Depth	85 X 4 Holes
Existing Tool Life	150 meters
Tool Life Achieved	162 meters
Result	No Breakage
Benefit	10% reduction in CPC

Challenge	Reduction in CPC
Component	Crankshaft 6 Cyliner
Material	Forged Steel 38 MnSiV6 30-32 HRc
Competition	OSG
Solution	DRILL 7.00MMX110X160 SH8 T/C DHD PT
Machine	Angular SPM
Vc	55m/min
RPM	2800
Feed in mm/min	150 @ entry/ 500 /150 @ exit
Depth	80 X 4 Holes
Existing Tool Life	150 meters
Tool Life Achieved	172 meters
Result	No Breakage
Benefit	15% reduction in CPC

Challenge	Reduction in CPC
Component	Crankshaft 4 Cyliner
Material	Forged Steel EN19B 280-320 BHN
Competition	OSG
Solution	DRILL 5.95MMX120X 192 SH6 T/C DHD PT
Machine	HMC
Vc	55m/min
RPM	2934
Feed in mm/min	150 @ entry/ 480 /150 @ exit
Depth	105 X 4 Holes
Existing Tool Life	110 meters
Tool Life Achieved	124 meters
Result	No Breakage
Benefit	10% reduction in CPC

Challenge	Reduction in CPC
Component	Cam Shaft
Material	Forged Steel 16MnCr5 20-25 HRc
Competition	Walter
Solution	DRILL 7.00MMX110X 160 SH8 T/C DHD PT
Machine	SPM
Vc	55m/min
RPM	2500
Feed in mm/min	400 @ entry/ 550 /400 @ exit
Depth	68 X 1 Holes
Existing Tool Life	68 meters
Tool Life Achieved	123 meters
Result	No Breakage
Benefit	50% reduction in CPC

Tips

- 1) Ensure surface is prepared/machined before drilling
- 2) Use the special Forbes Pilot drill for pre drilling
- 3) Check for wear on Pilot drill during operation, which can lead to premature failure of the DHD tool
- 4) Ensure adequate coolant pressure and good filtration of coolant
- 5) For long chipping steel, it may be necessary to increase feed rate by 10–20% to provide optimal chip control.
- 6) For drill retraction, drop the cutting parameters: 50 RPM and feed rate 2 m/min

Case Studies

Challenge	Reduction in CPC
Component	Crank Shaft
Material	Forged Steel SAE1541
Competition	OSG
Solution	DRILL 5.00MMX135X185 SH6 T/C DHD PT
Machine	SPM
Vc	59m/min
RPM	3800
Feed in mm/min	150 @ entry/ 480/150 @ exit
Depth	105 X 2 Holes
Existing Tool Life	26 meters
Tool Life Achieved	32 meters
Result	No Breakage
Benefit	10% reduction in CPC

Challenge	Reduction in CPC

$$\#RPM = SMM \times 318.057 / \text{Tool Dia.}$$

$$\#mm/min = RPM \times mm/rev$$

For coated F224/F226 increase cutting speed by 20%

CARBIDE REAMER

About TMRT - Totem Multiflute Reaming Tools

- These reamers are designed for the highest metal removal rates from diameter 1.5mm–12mm as a std
- All standard reamers are ground to an ISO H7 tolerance class hole to address most common applications.
- Special coatings and lead chamfer configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at high speeds.

Features & Benefits

- Higher Productivity and Profitability
- Longer tool life with increased hole and surface quality
- Highest metal removal rate at higher speeds and feeds due to reaming-specific low cobalt grades and substrates.
- Intermediate diameters from 1.5mm - 20mm can be offered as per various lead chamfer configuration as a custom solution.
- All TMRT reamers are also offered with internal coolant supply.

SOLID CARBIDE DRILL NOMENCLATURE

Chisel Edge – The non-cutting tip of the drill. Pushes, rather than cuts material. Having a smaller chisel means that a tool will cut more aggressively. A larger chisel means that a tool will be stronger.

Web – The core of the drill that is left from the fluting operation. A thicker web means added rigidity, while a smaller web means more chip evacuation. On two flute drills, typically varies from 16% - 30% of the tool diameter.

Helix Angle - Varies from 0° to 35° helix on standard tools. Lower helix angle means more rigidity and strength and a higher helix angle means more aggressive drilling and better chip evacuation.

Margin Width – Provides a surface to support the drill inside the hole during the drilling operation. Totem® offers both single margin and double margin geometries. Margin widths are a balancing act between friction build-up vs. tool support in the drilling operation.

Cutting Lip - The cutting edges of a two flute drill extending from the chisel edge to the periphery.

Land Width – The amount of material left on the drill per side, from the fluting operation. Larger land widths mean more rigidity, while smaller land widths allow for better chip evacuation.

Having a problem with drill geometries? Circle the area where the problem exists.
Include a detailed explanation of the issue and mail to sales@forbes.co.in

DRILL TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION
Hole expansion	Run out of drill when attached to the machine	Check holder and/or select another one
	Loose hold	Check run out after fixing to the chuck
	Non-symmetric point angle	Regrind correctly
	Different lip height	Check preciseness after reground
	Run out of chisel edge	
Irregular hole size	Non-symmetric point angle	Regrind correctly
	Large lip height	Check precision after regrind
	Run out of chisel edge	
	Margin wear is large	
	Large run out after attached to the machine	Check holder and select another one
	Loose hold	Check run out after fixing to the chuck
	Low work holding rigidity	
	Feed rate to high	Decrease feed rate
	Not enough lubrication	Use drill with an oil hole
Low position accuracy	Large run out when attached to the machine	Check holder and/or select another one
		Check run out after fixing to the collet
	Large spindle run out	Select more rigid tool and machine
	Run out when cutting material	Select more rigid tool and machine
		Increase work clamping rigidity
		Select a low cutting resistance thinning
		Use centering
		Work piece should be horizontal
		Use a drill bush
Hole perpendicularity	Excessive tool wear	Regrind
	Low position accuracy	Increase position accuracy
	Non-symmetric point angle	Regrind correctly
	Large lip height	Check precision after regrinding
	Run out of chisel edge	
	Not enough drill rigidity	Increase drill rigidity
	Drilling surface is not horizontal	Work piece must be horizontal
	Poor alignment	Make a center hole. Check alignment
Bad cylindrical accuracy	Non-symmetric point angle	Regrind correctly
		Check precision after regrinding
	Large lip height	
	Run out of chisel edge	
	Large run out after attached to machine	Check holder and/or select another one
	Loose hold	Check run out after fixing to the chuck
	Low work holding rigidity	
	Relief angle is too large	Regrind correctly
	Low drill rigidity	Use larger web drills

DRILL TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION
Poor surface finish	Poor regrinding	Take off all the wear
	Not suitable coolant for the material	Change supply method; increase volume
	Not enough coolant	Select higher coolant quality
	Large run out after attached to machine	Check holder and/or select another one
	Loose hold	Check run out after fixing to the chuck
	Feed rate is too high	Reduce feed rate
	Excessive tool wear	Regrind correctly
	Build up on margin is too large	Select a coated tool
	Chip packing	Select suitable drill (wide flute, high helix oil hole drill). Change cutting conditions (feed rate or adopt step drilling)
Bad cylindrical shape	Non-symmetric point angle	Regrind correctly
	Large lip height	Check precision after regrinding
	Run out of chisel edge	
	Large margin wear	
	Feed rate is too low	Increase the feed rate
Chipping of corner edge	In appropriate tool material	Choose suitable tool material
	Uneven hardness distribution on the work material	Iso static treatment
		Change tool, material & cutting conditions, machining method
	Cutting or feed speed is too high	Reduce cutting speed or feed
	Not enough coolant	Change lubrication method
Chipping of cutting edge	Large run out after attached to machine	Check holder and/or select another one
		Check run out after fixing to the collet
	Relief angle is too small	Regrind correctly
	Tool material is not suitable	Choose suitable tool material
	Cutting speed or feed is too high	Reduce cutting speed or feed
Abnormal wear on corner part	Too late regrinding	Regrind after a shorter time of use
	Bad alignment	Check/adjust the alignment
	Cutting speed too high	Decrease the cutting speed
	Point dimensions are not suitable	Select correct point dimensions
	Tool materials not suitable	Choose suitable tool material
	Coolant is not suitable	Change coolant
Large wear and chipping, crushing of the chisel edge	Feed rate is too large	Decrease feed rate
	Point dimensions are not suitable	Select correct point dimensions
	Tool materials is not suitable	Choose suitable tool material
	Relief angle is too small	Increase relief angle
Chipping of margin	Bush diameter is too small	Select correct bush diameter or select drill with chip breakers
	Chip packing between drill & bush	
Margin built-up	High heat generation due to large wear on the cutting edge	Regrind
	Lubrication is insufficient	Change lubrication method
	Coolant is not suitable	Change coolant
	Bad chip ejection	Change drill or the cutting conditions
	Ductile material

REAMER NOMENCLATURE

REAMERS TROUBLESHOOTING

Problem	Cause	Possible Remedy
Hole diameter too large. 	- Reaming tool running out-of-centre. - Concentricity of pilot hole and ream machining unsatisfactory. - Built-up edge. - Unsuitable cooling lubricant. - Reaming tool diameter too large.	- Use equalising adaptor. - Change cooling lubricant. - Change cutting speed. - Measure reamers and send for repairs.
Hole diameter too small. 	- Reamer worn. - Unsuitable cooling lubricant. - Reaming allowance too small.	- Replace and refit tool. - Change cooling lubricant. - Increase reaming allowance.
Conical hole profile wider towards drill runout. 	- Concentricity of pilot hole and reaming unsatisfactory. - Positioning accuracy of pilot hole to reaming.	- Re-align, use equalising adaptor. - Correct positioning accuracy.
Conical hole profile wider at drill entry point. 	Concentricity of pilot hole and reaming unsatisfactory.	Securely clamp reaming tool axially.
Hole out-of-centre and/or showing chatter marks. 	- Reaming tool running out-of-centre. - Slanted cutting surface/asymmetrical cutting. - Workpiece twisted.	- Use equalising adaptor. - Spot face as drilling preparation. - Take the direction of impact into account when clamping the workpiece.
Surface quality does not meet specification. 	- Tool cutters worn. - Reaming tool running out-of-centre. - Incorrect technology data (cutting parameters). - Inadequate chip evacuation.	- Use equalising adaptor. - Change cooling lubricant. - Change cutting speed. - Measure reamers and send for repairs.
Feed grooves. 	Built-up edge.	- Change cooling lubricant. - Change cutting speed.

Technical data provided should be considered advisory only as variations may be necessary depending on the particular application.

Deep Hole Drilling (DHD)- High Performance drills

Introducing the latest range of high performance solid carbide drills for deep hole drilling (DHD). DHD with through-coolant capabilities are tailor made to your specification. With an industry proven track record with its geometry, superior substrate and surface treatment, Totem drills command high wear resistance and micrograin structure to enable superior tool life and less breakage.

Application:- Oil Hole Drilling in Crankshaft

Material:- Forged Steel

Dia = 3.0–10,0mm

Length = 15D, 20D

Cutting conditions within a range of $vc = 60\text{--}100\text{ m/min}$, $fz = 0,10\text{--}0,25\text{mm/rev}$

Connecting rod bolt hole high performance drills

Our expertise in Connecting rod application for drilling has no comparison. Custom-made high performance drills with proven geometry, latest surface treatment, sub-micron substrate result in giving you the lowest Cost-per-part.

Application :- Connecting rod bolt hole drilling

Material:- Drop forged steel (heat treated)

Dia - 3-32mm

Length- 5D, 8D, 10D

Cutting conditions within a range of $vc = 60\text{--}100\text{ m/min}$, $fz = 0,15\text{--}0,35\text{mm/rev}$

High Performance Special Drills

Ultimate flexibility in supply of special drills as per customer's application with quick turnaround time. Our trained sales and application experts are ready to visit you to understand your needs in-depth. We commit to deliver superior solutions with lowest Cost-per-part.

Industry:-

Aerospace, Automotive, Defense, Railways, General Engineering & Energy Equipments.

Dia 1.00- 32.00mm

Options:- Solid, Thorough Coolant 30 degree Helix, 40 Degree Helix, Axial Coolant Duct, Parallel Coolant Ducts.

High performance micro drills

Automotive:-

Fuel Injection Parts, Common Rail Parts, Turbo Charger Parts, Steering Components, Automatic Transmission Power Train Components.

Precision Machining:-

Jewellery Industry, Spinnerets & Spin Plates, Electronic Connector Parts, Screw & Machine Components.

Industry:-

Aerospace, Valve Bodies, Thermocouples, Integrated Sensors, Interior Cabin, Fixtures, Fuel System, Components Hydraulic & Pneumatic Parts, Writing Instruments Ball Pen Tips.

Medical:-

Traumatology Medical Devices Bone Screws & Plate Surgical Suture Needles Orthopedics Components Dental, Implants & Bridges Watch Industry, Watch Case, Watch Plates, Small Precision Parts, Watch Link Components.

High Performance Cutting Tools

OPTIMAL BURR

Cutting material

Totem burrs are manufactured using the best quality of raw material. The EN-24 shanks used are precision turned and ground to ensure the least possible run out.

Coating

Our TiN and TiCN high performance burrs are offered in extreme conditions to

- a) Increase tool Life
- b) Reduce cutting forces
- c) Improve machinability
- d) Better chip evacuation

CARBIDE BURRS NOMENCLATURE

TYPE OF CUTS

Standard Cut (Single Cut):

This flute structure is designed for superior material removal and general purpose application. These can be used on Steel, Steel alloys, Cast Iron, Stainless Steel, Hard Bronze and Copper. Produces longer chips.

Supreme Cut (Double Cut / Cross Cut):

This burr allows for efficient stock removal in the harder materials. Its design reduces tool chatter and breaks the chips into granular shapes. These smaller chips also help to eliminate loading on the flutes. This design helps to have better control on the burr and grinder.

Deluxe Cut (Diamond Cut):

This design of tool is like triangular style of point, which produces extremely small chips (powder like chips). The cut eliminates pulling action of the main cut, and offers the operator good control over the tool and produces excellent finish. Effective in heat treated Steels and Tough alloy steels.

Aluma Cut (NF):

Designed for rapid stock removal on Non-ferrous materials. Recommended to work on Aluminium, Zinc alloy, Hand rubber and Wood.

Coarse Cut

Designed for hard aluminum alloys with an Si-content greater than 12% and non-ferrous metals.

SPEED RECOMMENDATION CHART

Material	3mm	6mm	8mm	10mm	12mm	16mm	20mm	25mm
Steel	60-90	30-45	25-35	20-30	15-25	10-18	10-14	8-10
Hardened / Tool Steel	30-40	15-20	10-15	10-15	8-10	5-8	4-7	3-5
Stainless Steel	30-50	15-25	12-20	10-15	9-12	7-10	5-7	4-5
Nickel / Titanium	30-40	15-20	10-15	10-15	8-10	5-8	4-7	3-5
Cast Iron	60-90	30-45	25-35	20-30	15-20	10-18	10-14	8-10
Aluminium / Plastics	30-90	15-60	12-50	10-50	8-35	6-30	5-20	4-15
Brass	40-50	20-30	15-20	13-17	10-15	8-12	6-8	5-6
Copper	30-90	15-60	12-50	10-50	8-35	6-30	5-20	4-15
Zinc	60-90	30-45	25-35	20-30	15-25	10-18	10-14	8-10

The table lists recommended rotational speeds (RPM) as a function of burr diameter.

SAFETY NOTE:-

Tools with long shanks must be placed on the workpiece, or inserted into the bore or groove, before the power source is switched on. For safety reasons we urge you to reduce idling speeds (RPM) by up to one-third from the values stated.

RECOMMENDATIONS FOR USE:

TOTEM Tungsten Carbide Burrs are designed for machining materials of virtually any strength; the superior performance reflects an optimum combination of key parameters such as shape, number of flutes, spiral angle, rake angle and concentricity. The precise concentricity of TOTEM tungsten carbide burrs

- Ensures an improved protection of operator safety and health
- Reduces power tool wear
- Provides smooth operating behaviour
- Prevents chatter marks

An optimum power output and RPM of the power source (air-powered or electric machine, flexible shaft system) are necessary conditions for an economically efficient use of tungsten carbide burrs. We therefore recommend you to observe the following rules:

- Work with maximum RPM. Do not use speeds below 3000 RPM except in special cases (eg: on stationery machines or when countersinking with fully immersed burr).
- Chucks and collets must be absolutely concentric to avoid chipping. Tool runout and chatter will result in premature wear.
- Work with significantly reduced RPM on poorly heat conducting materials (eg: stainless steel, titanium alloys, etc.) to prevent tool damage. Avoid the typical blue Discoloration of the shank and the tool.
- In light cutting applications (deburring, chamfering, light surface work) the tool speed may be increased up to twice indicated rate.
- When machining very sticky materials, the use of a suitable lubricant (grease, kerosene, chalk or similar) is recommended to prevent loading.

High Performance Cutting Tools

CARBON STEEL TAPS NOMENCLATURE

CARBON TAPS APPLICATION

AUTOMOBILE INDUSTRY

- Cylinder liner and Cylinder head manufacturers
- General purpose applications in small workshops, garages, tool rooms and maintenance departments
- Motor cycle body frames: Spatter cleaning and removing paint from threaded portion.
- Carburetor and speedometer manufacturers
- High Speed Steel Dies are used in removing paint from threaded portion in rear axles of cars, trucks, buses, etc.
- Dies are used by gas valve manufacturers.

ENGINEERING INDUSTRY

- Air Compressors / Blower manufacturers
- Cooling towers and heat exchangers
- Brass component manufacturers
- Pipe and Pipe fitting manufacturers.
- Sheet Metal Industry
- Thread dressing of diesel engine components
- Steel furniture manufacturers
- Steel window manufacturers
- Bus and Truck body building workshops
- Textile industry
- Electrical industry

HOUSEHOLD APPLIANCE MANUFACTURERS

- Pressure cookers
- Fans, Air coolers, Air conditioners
- Flour mills, Mixers and Grinders

High Performance Cutting Tools

DIES

ROUND DIES NOMENCLATURE

HEXAGONAL DIES NOMENCLATURE

DOS AND DONT'S- THREADING WITH DIES

- **CHAMFER:** make a chamfer at the end of the bar at an angle of 45 degrees to remove sudden loading of the leading edges. This has to be done before starting the die or die nut. Also it has to be made certain that the die or die nut is presented to the bolt squarely.
- **TOLERANCE:** Major diameter of the bolt usually has large tolerances. Use this to your advantage by reducing the diameter of the bar. Thus, the cutting force will be reduced to a minimum. If tolerance class is not specified, consider tolerance applicable for medium range i.e. 6H and 6G.
- **SWarf:** To direct the swarf away from cutting area, it is always preferable to use the gun nose type of die.
- **LUBRICANT:** The cutting area should always be supplied with a steady flow of the correct lubricant.
- **SPLIT DIES:** To avoid rubbing, the adjustable split die should not open out. Move the adjustable screws equally by say, 0.15 mm to close the split die. If it is done unequally, there may be pressure on one side which may lead to breakage.
- **CLEANING:** As a norm, die nuts are used for cleaning out existing threads. Usually the process is done by hand. Avoid using die nuts for thread cutting unless it is an exception.
- **RAKE ANGLE:** Large rake angle for long chip formation whereas a small rake angle for short chip formation. Its applicable and or workpiece material isn't specified, assume it as intermediate tensile strength.

1. An excellent general purpose drill with conventional 118° point angle
2. Shorter flute & overall length increases the rigidity, resulting in less deflection, better hole accuracy & longer tool life
3. Stable cutting edge
4. Better chip evacuation
5. Better hole straightness
6. Eliminated breakages
7. Operating at higher feeds
8. Ideal to use in manual hand held drilling application
9. Superior tool life

1. Made from premium grade High Speed Steel
2. High performance drills suitable for Production applications & also for tough Maintenance applications
3. Well suited for drilling on Stainless Steel & challenging Alloy Steel materials
4. Precision ground 135 Degree Split Point angle is Self Centring & reduces Thrust during application
5. Special Black & Gold surface treatment to increase lubricity & reduce friction
6. Stable cutting edge
7. The strong web construction provides greater strength & rigidity to the drill
8. Better chip evacuation
9. Better hole straightness
10. Eliminated breakages
11. Operating at higher feeds
12. Superior tool life

1. Made from premium grade High Speed Steel
2. Used for producing centre holes in metal work pieces
3. Also used for work-pieces requiring machining between centres
4. Stable cutting edge
5. Superior tool life
6. Also available in HSS-E (5% Cobalt) material on request

- Made from premium grade High Speed Steel
- Applicable to hole cutting & process of annular groove on various magnetic drills
- Multi – cut geometry for ply – cutting & lower friction to reach better performance of endurance & removal of chips
- Meets requirements of hole cutting on various materials
- Available in One Touch Shank (Universal shank Dia ¾" or 19.05 mm)
- Available from Diameter 12 MM to 50 MM & Depth of Cut 30mm max & 55mm max
- Also available in fein shank

1. Applicable to hole cutting & process of annular groove
2. Suitable on various materials
3. Premium quality carbide tips for ply – cutting & lower friction
4. Multi – Cut geometry for increases chip removal
5. Diameter 12mm to 40mm & Cutting Depths 40mm & 55mm
6. Universal shank 3/4" (19.05 mm) for various magnetic drill machines (Totem manufactures the cutters in one touch shank which incorporated the Weldon and Nitto shank, thus widens the application of cutters
7. Operates on higher RPM than HSS tools
8. Can also be used on corroded or weathered material

Dos & Don'ts for HSS / HSS-E Drills

1. Adjust drilling condition according to the rigidity of machine or the work clamp state
2. Adjust drilling condition when unusual vibration, different sound occurs while cutting
3. Provide sufficient amount cutting fluid to the cutting point & in the flute
4. When the hole depth is more than $3 \times D$, reduce the rotation & feed by 20%
5. When the hole depth is more than $3 \times D$, add step seeding. The depth of step should be from 0.2 to 1.0 diameter
6. For Stainless Steel material drilling, use step feed. In step feed, return to the entrance hole
7. Adjust the drill run out to the lowest value possible
8. Ensure the correct Point Angle, Lip position & Lip Length post regrinding operation
9. Do not allow the choking of swarf

Dos & Don'ts for Annular Cutter

1. Different feed forms different shaped chips, which determines the chip evacuation efficiency
2. During the beginning & before the end of hole cutting, decrease feed rate by $1/3$ to reduce the damage on cutter
3. Sufficient coolant supply is necessary to increase the smoothness of hole as well as the quantities of holes to be cut
4. Some materials like Cast Iron, Copper etc result in chips in powder form while cutting. Hence compressed air is recommended for cooling instead of coolant
5. Remove the chips twining around the cutter from time to time
6. When the wear width of cutting edges reaches 0.4mm, cutter should be replaced

BRADMA MAGNETIC DRILL: BRADMAG35

What is Magnetic Drill?

Magnetic Drill is a Portable drilling machine with an electromagnetic base or a permanent magnet base. It can drill hole using Annular Cutters in various materials thereby producing accurate, burr free holes

Why to use Magnetic Drill?

Owing to its portability it can easily be carried to the work piece, instead of bringing the work piece for Drilling

Model	BRADMAG35
Motor rated power	1100 W
No load speed	700 rpm
Rotating direction	Clockwise
Arbor bore	19.05mm (3/4") dia.
Cooling method	Internal cooling
Voltage	AC 220V~240V
Frequency range	50-60Hz
Magnet deadlift	10000 N
Max.cutting dia. (annular cutter)	35mm (1-3/8 ")
Max cutting depth	50 mm (2")
Stroke	120mm
Magnet footprint	165mm × 80mm × 43mm
Weight	10.5kg
